

SYSTEM FOR DRYING EQUIPMENT

Abstract

The present invention provides a bag, box or other compartmentalized storage and/or transportable system for heating and/or drying articles in the system. The bag includes at least one heating element that transmits sufficient heat to dry and heat articles, such as boots, shoes, clothing, equipment and the like, from the outside inward to completely dry the articles. The heating elements are connected to a power source, such as electrical outlet, vehicle DC power adaptor or battery source.
